

# Stokesia MEL S BLUE - Pépinières Renault

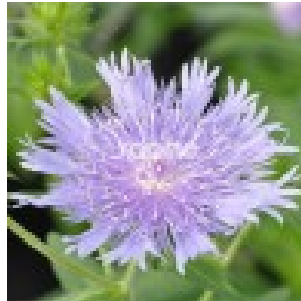

**Product** Stokesia MEL S BLUE

---

**Reference** 247

---

**Product Image**

---

**Summary** A wealth of luminous flowers on upright stems

---

**Description**

This is an upright, regularly rounded selection, well branched from the base. The floral stems are robust and straight and carry numerous wide and brightly-coloured flowerheads. The elegantly cut ray florets are blue-purple surrounding a white disc. Flowering from the end of June, a profusion of blooms are renewed all summer. They attract butterflies. 'Mels Blue' is recommended for flowerbeds or tubs; it catches the eye from a distance.
